

# CURBSIDE SOLIDWASTE TIPS

**Proper cart placement helps drivers do their jobs safely and efficiently. Here are some tips for proper cart placement:**

- Place all trash in trash bags before placing in the trash can.
- Place your trash can out for collection the NIGHT BEFORE your pick-up or the SAME DAY BY 6:30 a.m.
- If you have overflow trash every week, please call our office to add a second trash can for a fee.
- Give the carts some room. Whether you have one or multiple carts, you should always leave a minimum of 2-3 feet between the cart and other objects (additional carts, mailboxes, trees, etc.) Always ensure the carts are visible for the driver to see and service.
- Trash cans need to be closer to street for the truck arm to reach the trash can. All Waste Pro trucks use an automated arm to collect the trash carts from the curb. It is very important that the carts are not blocked by vehicles or other obstructions that can prevent the truck's arm from easily reaching the carts.
- Please call in advance to schedule a pick up for extra trash bags that will be placed outside the trash can.
- Please keep lids closed to prevent litter from falling onto the street.
- Carts should be placed with handle facing your house, wheels against the curb, and lid opening towards the street.
